SELECTED PROJECTS

Direction-of-Voice filter

<https://github.com/AudioMLLab/dov-audio-filter>

- Created an application to filter undesired voice audio by using machine learning to eliminate the portion of audio originating from speakers not facing the microphone. Joint work with Abiramy Kuganesan.

This Pokémon Does Not Exist

https://github.com/emsalo/pkmn_doesnotexist

- Developed a machine learning project in TensorFlow that uses a variational autoencoder to generate novel Pokémon sprites. Entered into nwHacks 2020.

Twitter Clustering Project

<https://emsal.me/blog/4>

- Conducted a machine learning analysis using Python and Julia.
- Implemented the DBSCAN clustering algorithm on a social network graph structure to identify distinct groups.

Socksify

<https://github.com/emsalo/Socksify>

- Created a program written in C that allows users to run processes with all outgoing TCP traffic going through a SOCKS5 proxy.
